EDITORIAL

Readers will recall from this column in the July issue that I indicated an upcoming change in the editorial oversight of this publication. At that time there were several uncertainties about how that was going to unfold but the haze has cleared in the interim. I'm pleased to report that responsibility for subsequent issues of the M&S Magazine will be in the hands of two enthusiastic and capable individuals; namely, Prof Andreas Tolk from the Old Dominion University, USA and Prof Francesco Longo from the University of Calabria, Italy. They will serve as co-Editors-in-Chief. I wish them every success in the further development of the M&S Magazine both as a significant member benefit for the Society for Modeling and Simulation International and as an information resource for the modeling and simulation community at large.

There is a curious imbalance in the make-up of this issue that some may have noticed. There are fewer than "normal" articles and more than normal "Messages from the SCS" (namely two). This circumstance can be linked to both the upcoming changes in the oversight of this publication and to changes in the governance of the SCS. The format of future issues will, of course, be in the hands of our new Co-Editors-in-Chief.
