

SUMMERSIM'20

2020 Summer Simulation Conference

AIMS AND SCOPE

Real-world applications were originally the driving force for the development of Modeling and Simulation (M&S) theories. After that, Theory of Modeling and Simulation (TMS) was conceived as a necessary artifact to develop models and simulations with theoretical background. The purpose of the **Applied Theory of Modeling and Simulation (AToMS) Track** is to provide a forum to show recent success stories about the application of M&S theories to the real world. The aim is to bring rigorous experimental, computational practice of TMS devoted to the study of real-world problems.
